EXPERIENCE

Limesharp Internet Ltd., London, UK — Front End Developer

August 2022 - September 2023 (~1.1 years)

I would consider this as the major leap forward in experience, knowledge, and expertise in my career, as Limesharp is an eCommerce agency that gave me the opportunity to work on a large variety of tasks in different environments, collectively having the necessary impact on me to improve and develop on different key aspects to continuously grow not only as a front end developer but also as a person and individual in a more team-focused environment.

- Developed, maintained, and shipped production code for client websites primarily using HTML, CSS, SASS, Tailwind, JavaScript, and Vue.js
- Performed quality assurance tests on various sites to ensure cross-browser compatibility and mobile responsiveness
- Clients included ME+EM, Brora, Jo Loves, GF Smith, and more

Generazia d.o.o., Kakanj, BA — Front End Developer

January 2021 - May 2022 (~1.5 years)

I decided to join this company with the aim of expanding my understanding of web development, mainly focusing on the front-end aspect. My role involved developing front-end components, which were both clear-cut and demanding. I found quite the pleasure and satisfaction in carrying out this task. I eagerly anticipated it every single day. Eventually, I left the company feeling fulfilled and driven to pursue a position that would propel my career forward within this field.

- Built components and developed code that could be easily reused in parts of the website.
- I utilized my expertise in HTML to structure the content of web pages, while also making it semantically appealing with accessibility in mind.
- I used CSS to create cohesive layouts, and firmly styled components, incorporating responsiveness across devices.

SKILLS

Html
Css
Javascript
React
Vue
Tailwind CSS
Sass
Git
Storybook
Storyblok

SOFT SKILLS

Critical thinking
Problem-solving
Teamwork and collaboration
Troubleshooting
Observation
Resourcefulness
Self-management
Willingness to learn
Positive attitude
Research and Analysis

SELECTED PROJECTS

Audiophile E-Commerce

Being an e-commerce-type website, I had to think strategically so all the parts and components would work together firmly. This project gave me the opportunity to learn crucial skills regarding any shop or sales-related website, on custom components to order confirmation.

Digital Design

Digital Design is a heavy style and animation-sided website where critical styling and animating skills have been established. A massive contributor to where the learning accomplishments came from is that the code for styles and animations is custom written and developed by myself in the React framework.

Trillow Real Estate

This project represented quite a unique set of challenges for me at that time. I was faced with problems regarding an unreliable API presented to me. To overcome these obstacles, I had to make many assumptions as well as double and triple-checking when it comes to the properties provided by the given API.

Superchat

This project taught me a lot about handling client and back-end interactions. Consisting of two pages, superchat was custom designed and developed by myself to accomplish the main criteria of users being able to interact with each other.

Weather App

As a weather application, the criteria was to use the proper API to accurately show and inform the user about the weather conditions, either based on your location or a user-selected location, with also the aspect of two different layouts and a plethora of different looks depending on the weather cast at hand.
